

38TH MASP SUMMER INSTITUTE

SAVE THE DATE

June 4TH AND 5TH 2018

Randy Sprick, PhD

Create a Multi-Tiered System
of Behavior Support:

Improve School Climate and Discipline for All

When MTSS (multi-tiered system of support) is implemented properly, a culture of data-driven decision-making is created that results in a unified school staff that is increasingly able to meet the social/behavioral needs of ALL students. This session will provide a wealth of practical examples of how successful schools are implementing behavior support procedures that reduce misbehavior while increasing student motivation and responsibility. The procedures described will be at the schoolwide, classroom, and individual student levels, and will include procedures for teaching responsible behavior in all school settings. Strategies for increasing the consistency of positive intervention by all staff will be provided.

TOPICS INCLUDE

- Schoolwide Behavior Management: Universal Prevention
- Classroom Management: Universal Prevention
- Tier 2 and Tier 3 Behavior Support

Participants will leave with specific strategies they can implement immediately, an understanding of the strengths and weaknesses of their current school climate, and a plan for increasing staff awareness of the need to work together to intentionally improve climate on an ongoing basis.
